

# RabbitHoles<sup>®</sup>

## ETC Demo Setup for larger RabbitHoles<sup>™</sup>

Here's how to setup an easel and ETC light for demonstration purposes.

Assemble the ETC light and the aluminum plate as shown. Adjust the angle of the light to 45°.

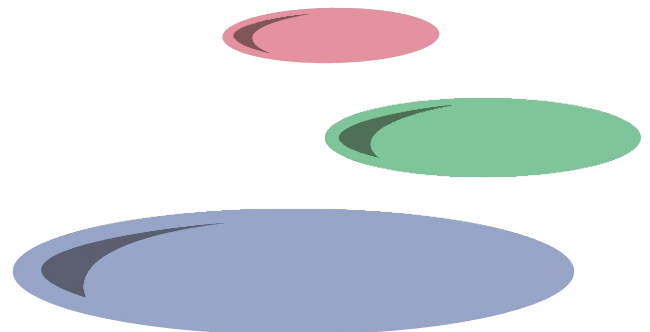

Place the ETC on the floor directly in front of the easel with its pivot point 51 inches (1300 mm) from a point on the floor directly below the RabbitHole<sup>™</sup>.

Follow the instructions on the RabbitHoles<sup>™</sup> **ETC Theater Lighting – Focus and Adjustment** info sheet in order to properly adjust the ETC for the best results.

If you have any questions regarding the setup of an ETC and easel please do not hesitate to contact us.
